

Safety Vests - V1000

Low visibility is one of the most serious hazards facing workers today in construction work zones. ANSI/ISEA 107-2004 is a nationally recognized performance based standard for high-visibility apparel. By using an ANSI class garment the user maximizes their visibility to the motorist. The standard offers three classes of garments based on worker hazards, complexity of the work zone, vehicular traffic and speed considerations. ANSI Class II and Class III garments require 360 degree retro-reflectivity with specific criteria regarding width, placement and spacing of the tape, along with color brightness of the background material. In addition, Class III garments now require sleeves with reflective encircling the arm.

The **V1000** vest meets ANSI Class 2 standards and features solid polyester material with a five point tear away design, one size fits most adjustability, triple-trim reflective stripes, expandable radio pocket, pencil pocket, mic clip, message provision on the back, and hook and loop closure.

Adjustable side straps for a custom fit

Mic clip and pencil pocket

Silver Reflective Message Patch (optional)

Provision on Back for Optional Message Patch

V1000
