

#TLL8S - 6V Barricade Light

DICKE

Since 1886

Operating Instructions

(A) Battery Installation

Remove the bottom of the case, install 6V batteries, (TLL8S will operate with one or two) and snap the case top back on. The orientation of the spring terminals on the batteries does not matter.

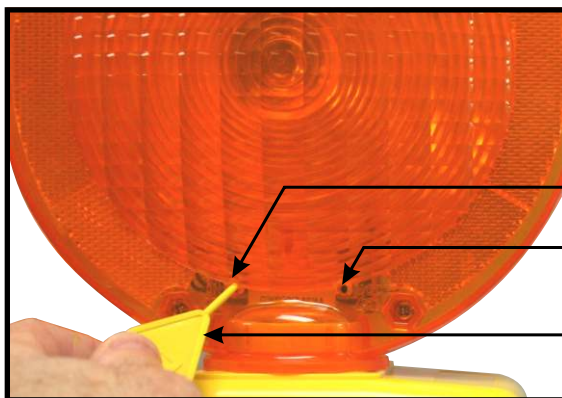

(B) Operation

With the front of the light (label/diamond-shaped nut side) facing forward, use the included switch key to turn the light on by inserting it into the "ON" hole on the left side near of the base of the lens and pushing in. Pushing in again turns light off. Select the operating mode by inserting the key into "MODE" hole and pushing in. This switch toggles between the **FLASH** and **STEADY BURN** modes.
